

PROJECT REPORT

for

Biomass Pellet Manufacturing Unit

This particular pre-feasibility is regarding Biomass Pellets Manufacturing unit which is categorised as Green Category Industry as per the CPCB & PPCB.

The objective of the pre-feasibility report is primarily to facilitate potential entrepreneurs in project identification for investment and in order to serve his objective; the document covers various aspects of the project concept development, start-up, marketing, finance and management.

PROJECT AT A GLANCE

Biomass Pellets

Name of Project

Biomass Pellet Manufacturing Unit

Total Project Cost

Rs. 480.00 Lacs

Means of Finance

Term Loan: Rs. 262 Lacs,
Equity (Own Contribution + Subsidy): Rs. 218 Lacs (78 Lacs + 140 Lacs)

Debt Service Coverage Ratio (DSCR)

4.59

Payback Period

3.5 Years

Project Implementation Timeline

3-4 Months

Break Even Point

28%

Employment Generation

16 Persons

Power Requirement

800 KW

Major Raw Materials

Paddy Straw, Sawdust, Rice Husk

Estimated Annual Sales Turnover

Rs. 1560 Lacs

:

Introduction –

About the Key Persons

Raw Material:

Bio pellets made from agriculture waste are sourced from a diverse array of biomass materials, primarily crop residues such as straw from wheat, rice, and barley constitute a significant portion of the raw materials. These residues are plentiful after harvest and processing, offering a sustainable feed- stock for bio pellet production.

Availability of Paddy Straw in Punjab Region:

S.No.	District	Area under Paddy	Area under Basmati	Area under Non-Basmati	PaddyStraw Available in MT
1	Amritsar	180000	139000	41000	1778400
2	Barnala	114000	3000	111000	1126320
3	Bathinda	167000	2000	165000	1649960
4	Faridkot	116000	27000	90000	1146080
5	Fatehgarh Sahib	86000	8000	79000	849680
6	Fazilka	114000	72000	42000	1126320

KRISHI BHAWAN, NEW DELHI

Uses & Market Potential:

- Every year, about 27 million tonnes of paddy straw is generated in Punjab and Haryana. About 11 million tonnes can be managed in the field and the rest is usually burnt which adds to the air pollution crisis in Delhi.

Farmers set their fields on fire to quickly clear off the crop residue before cultivating wheat and potato. Burning husk on the ground destroys the nutrients in the soil, making it less fertile. Heat generated by stubble burning penetrates into the soil, leading to the loss of moisture and useful microbes.

Hence, turning the Paddy straw to into pellets can be mixed along with coal in thermal power plants. This saves coal as well as reduces carbon emissions that would otherwise have been emitted were the straw burnt in the fields. This scheme will help convert waste to wealth and provide entrepreneurship opportunities to our rural youth in Punjab and Haryana. The government has mandated co-firing of 5 to 10 percent of biomass along with coal to address the issue of air pollution and to reduce the carbon footprint.

Biomass energy can reduce reliance on fossil fuels like oil, gas, and coal, which release carbon into the atmosphere. The biomass pellet market is expected to grow at a CAGR of 6.1% from 2023 to 2031. The global market size was valued at USD 8.5 billion in 2022.

List of Thermal Power plants:

- Rajpura Thermal Power Plant, Rajpura
- Talwandi Sabo Power Project, Mansa
- Guru Nanak Dev Thermal Plant, Bhatinda
- Guru Gobind Singh Super Thermal Power Plant, Ropar
- Guru Hargobind Thermal Plant, Lehra Mohabbat, Bhatinda

TARGET MARKET:

Industrial Sector:

Manufacturing Plants:

Industries such as food processing, textiles, paper, and chemical manufacturing that require consistent and efficient energy sources for heating, steam generation, and production processes.

Power Generation Companies:

Power plants, particularly those transitioning from coal to renewable energy, that use biomass pellets for co-firing or as a primary fuel source. Agriculture and Rural Sector:

Agricultural Enterprises:

Farms and agro processing units that generate large quantities of organic waste and can benefit from converting this waste into biomass pellets for energy or sale.

Rural Communities:

Villages and small towns where biomass pellets can be used as an affordable, sustainable alternative to traditional fuels for heating and cooking. Commercial Sector:

Commercial Heating Systems:

Businesses such as hotels, hospitals, and schools that use biomass pellets in their heating systems to reduce energy costs and lower carbon emissions.

Energy Service Companies (ESCOs):

Companies providing energy solutions to commercial and industrial clients, interested in sustainable and cost-effective fuel sources like biomass pellets.

Export Markets:

European Market: Countries in Europe, particularly in Northern and Western Europe, where biomass pellets are widely used for residential heating and power generation due to stringent environmental regulations and strong government incentives for renewable energy.

Asian Markets: Emerging markets in Asia, such as Japan and South Korea, where the demand for biomass pellets is increasing as part of their renewable energy strategies.

North American Market: The United States and Canada, where biomass pellets are gaining traction in both residential and industrial applications, driven by environmental awareness and the push for greener energy solutions.

Market Assessment:

The biomass pellet industry is a rapidly growing sector within the broader renewable energy market. Biomass pellets, made from compressed organic materials such as wood chips, agricultural residues, and other biomass waste, are increasingly recognized as a sustainable and eco friendly alternative to fossil fuels. The demand for biomass pellets is driven by several factors:

Technological Advancements:

Advances in pellet manufacturing technology have improved the efficiency and quality of biomass pellets, making them more competitive with conventional fuels. Innovations in machinery and production processes have also reduced operational costs, making biomass pellets a more attractive option.

Global Trade Expansion:

The global trade of biomass pellets is expanding, with key markets in Europe, Asia, and North America. Export opportunities for biomass pellet producers, especially from countries with abundant raw materials, are significant.

Environmental Regulations:

Governments worldwide are implementing stricter regulations to reduce carbon emissions and promote the use of renewable energy sources. Biomass pellets, as a low-carbon alternative, are gaining popularity, especially in Europe and North America.

Renewable Energy Targets:

Many countries have set ambitious renewable energy targets, leading to increased adoption of biomass pellets in power generation and heating applications. The global push for cleaner energy solutions continues to boost the demand for biomass pellets.

Rising Energy Costs:

As the cost of traditional energy sources like coal, oil, and natural gas increases, industries and households are turning to biomass pellets as a cost effective energy solution. This trend is particularly strong in regions with abundant biomass resources.

Government and Public Sector:

Government Initiatives: CPCB has issued guidelines in March 2023 for providing one-time financial assistance for setting up paddy straw based pelletisation plant to promote the utilisation of paddy straw. Under the said guidelines, the maximum financial assistance provided for setting up the pelletisation plant is Rs. 28 lacs per Ton per Hour (TPH) or 40% of the capital cost considered for the plant and machinery, whichever is lower, up to maximum Rs. 1.4 crores per proposal.

Details of Eligible Capital Subsidy under the Scheme are as under

(Rs. In Lacs)

S.No.	Eligible Capital Cost	Total Cost
1	PLANT & MACHINERY (AS PER QUOTATION)	350.00
	Total Eligible Capital Cost for Subsidy	350.00

Capital Subsidy @ 40% of eligible Cost i.e.140.00 Lakhs

ENVIRONMENT IMPACT/PROTECTION MANAGEMENT

In the pellet manufacturing business, environmental impact and protection management are critical due to the potential environmental hazards associated with the production process. Government regulations and clearances are required to ensure that the operations are sustainable and do not harm the environment. Here's a breakdown of key considerations and requirements:

Regulatory Framework

Environmental Permits: The company must obtain various environmental permits before starting operations. These may include air and water discharge permits, waste management licenses, and land use clearances.

Environmental Impact Assessment (EIA): An EIA may be required to assess the potential environmental effects of the pellet manufacturing process. This involves a detailed study that evaluates the impact on air quality, water resources, soil, and local biodiversity.

Key Environmental Concerns

Air Emissions: Pellet manufacturing involves processes like drying, grinding, and pelletizing, which can produce significant air emissions. Regulations typically require the installation of air pollution control devices, such as scrubbers and electrostatic precipitators, to minimize emissions of particulate matter, volatile organic compounds (VOCs), and greenhouse gases.

Waste Management: The generation of waste material, including dust, off-spec pellets, and wastewater, must be managed properly. Regulations often mandate the development of a waste management plan, including recycling and safe disposal methods.

Water Use and Discharge: Water is used in various stages of pellet production. Companies must ensure that water use is sustainable and that wastewater is treated before discharge to prevent pollution of local water bodies.

Noise Pollution: Noise generated by machinery and transportation can be a concern, especially in areas close to residential zones. Regulations may require noise abatement measures to minimize the impact on the local community.

Clearance Processes

Environmental Clearance: This is a critical step where the business must submit an application detailing the proposed operations, potential environmental impacts, and mitigation strategies. The government reviews the application, and public hearings may be held to address community concerns.

Periodic Audits and Monitoring: Once operational, the business must comply with ongoing monitoring and reporting requirements. Environmental audits may be conducted by government agencies to ensure continued compliance with regulations.

Sustainable Practices

Use of Sustainable Raw Materials: The pellet manufacturing process should prioritize the use of renewable and sustainable biomass sources, such as agricultural residues, to minimize the depletion of natural resources.

Energy Efficiency: Implementing energy-efficient technologies can reduce the environmental footprint of the manufacturing process. This may include using biomass as a fuel source for production or investing in energy-efficient machinery.

Recycling and Reuse: Efforts should be made to recycle waste materials and water within the production process to reduce the environmental impact.

Manufacturing Process

- **Raw Material Procurement:** Agricultural residues such as Paddy Straw (Parali) and other agro waste products like wood chips, sawdust, straw, animal waste are collected
- **Shredding:** Raw material is then shredded into smaller particles to facilitate drying
- **Drying:** The shredded biomass undergoes drying to reduce moisture content to around 10-15%, crucial for pelletization
- **Fine Crushing (With Hammer Mill):** Dried biomass is then converted into fine powder with the help of hammer mill
- **Pelletization:** Dried biomass is compressed through a pellet mill under high pressure, forming cylindrical pellets
- **Cooling and Sieving:** Newly formed pellets are cooled and sieved to remove fines and ensure uniform size
- **Packaging and Storage:** Pellets are packaged in bags or stored in bulk under dry conditions to maintain quality

Details of Machinery:

PRODUCTION CAPACITY:

Sr. No	Agro Waste (Raw Material)	GCV (Kcal/Kg)	Ash (%)	Moisture (%)
1	PARALI	3200- 3400	15-20 %	15% to 30%

Sr. No.	Particulars (Product)	Production Capacity (TPH)	No. of Working Hours per day	Total Production per day	Total Production Per Month@ 25 days
1.	Non Torrefied Pellets	5	16	80	2000 Ton

Area:

The industrial setup requires space for Inventory, workshop or manufacturing area, space for power supply utilities. Also, some of the area of building is required for office staff facilities, office furniture etc. Thus, the approximate total covered area required for complete industrial setup is 5500-6000 Sq ft and rest of the open space for raw material storage.

COST OF THE PROJECT AND MEANS OF FINANCING

COST OF PROJECT

(Rs. In Lacs)

Particulars	Amount
Land	On lease
Building	On lease
Plant & Machinery	413.00

	Total	30.00

Assumptions:

- Production Capacity of Biomass Pellets Manufacturing unit is taken at 80 MT per day and 25 days per month making it total of 2000 MT per month.
- Working shift of 16 hours per day has been considered.
- Raw Material closing stock has been taken for 1 months
- Credit period to Sundry Debtors has been given for 15 days
- Credit period by the Sundry Creditors has been provided for 5 days
- Depreciation and Income tax has been taken as per the Income tax Act,1961.
- Interest on Term loan has been taken at 10%.
- Salary and wages rates are taken as per the Current Market Scenario.
- Power Consumption has been taken at 600 KW
- Selling Prices & Raw material costing has been increased by 3% & 5% respectively in the subsequent years.

Financial Aspects of the Project:

Computation of Raw Material for the capacity of @ 5 TPH
